MADISON COUNTY

SOME FACTS AND FIGURES

Madison County, with a total of 3,258 farms in an area of 450 square miles, is distinctly a farm county. More than 93 per cent. of the entire area of the county is in its farms, and more than 71 per cent. is under cultivation. The farms are, as a rule, of more than average size, less than 6 per cent. being under ten acres. They are almost without exception profitable and correspondingly valuable. The farmers, as a class, are the most prosperous folks in the county. In view of the number of farmers, that is in itself a statement of the wealth of this section.

The farm population of Madison County is almost exclusively native born white. There are but few foreign, and only four negro farmers in the entire county, according to the most recent United States Government statistics.

It is interesting to note the number of farms in the county operated by their owners. Of this class there are 2,056 or 63 per cent. One thousand two hundred and sixty-nine or 61 per cent. of them are reported free of mortgage debt. This is an exceptionally large percentage. Of the balance, the remarkably low mortgage indebtedness of only 21 per cent. of the entire valuation is carried. Even in the absence of other statistical figures, these mortgage statements alone would indicate exceptional prosperity among Madison County farmers.

The largest single crop, and the one produced most generally throughout the entire county, is corn, of which 4,157,170 bushels were produced in 1910, a notably bad crop year, but the latest for which authoritative figures are available. Following closely on this for quantity is oats, with a total of 795,090 bushels; wheat comes next, with 505,744 bushels, and potatoes fourth, with 102,377 bushels. The combined total value of these four crops was in excess of three million dollars.

Everywhere is an atmosphere of hard work. Everyone takes work seriously and as a matter of course. There is no false pride about it, and no failure to realize its importance and its necessity. Rich farmers' wives, and sons and daughters, take pride in their fine butter, their eggs, their vegetables, their chickens and their stock. The relations between the people of the farms and the people of the county seat are most cordial. The farmers deposit their savings in the local banks, and deal in the local stores.

This directory is published in the belief that it will serve to acquaint the residents of one end of the county with those of the other. We believe it to be accurate. We realize, however, that even in the most carefully compiled and printed books certain errors are bound to appear, and we apologize in advance for any such that may be found by our subscribers.

MADISON COUNTY ADVERTISERS

SPRAYING FORMULAS

FUNGICIDES.—Bordeaux mixture is made by taking three pounds of sulphate of copper, four pounds of quicklime, fifty gallons of water. To dissolve the copper sulphate, put it into a coarse cloth bag and suspend the bag in a receptacle partly filled with water. Next, slake the lime in a tub, and strain the milk of lime thus obtained into another receptacle. Now get some one to help you, and with buckets, *simultaneously* pour the two liquids into the spraying barrel or tank. Lastly, add sufficient water to make fifty gallons. It is safe to use this full-strength Bordeaux on almost all foliage—except, perhaps, on extra tender things, such as watermelon vines, peach trees, etc. For these it is wiser to use a half-strength mixture.

FORMALIN.—This is also called formaldehyde, and may be purchased at drug stores. Its principal use is to treat seed potatoes to prevent "scab." Soak the whole seed for two hours in a mixture of one-half pint formalin and fifteen gallons of cold water; dry the seed, cut, and plant in ground that has not recently grown potatoes.

BORDEAUX COMBINED WITH INSECT POISON.—By adding one-quarter pound of Paris green to each fifty gallons of Bordeaux, the mixture becomes a combined fungicide and insecticide. Or, instead of Paris green, add about two pounds of arsenate of lead. The advantages of arsenate of lead over Paris green are, first, it is not apt to burn foliage even if used in rather excessive quantities; and, second, it "sticks" to the foliage, etc., better and longer.

INSECTICIDES.—ARSENATE OF LEAD.—This is the best insecticide for chewing insects, and is for sale by seedsmen. Use about two pounds in fifty gallons of water.

WHITE HELLEBORE.—This, if fresh, may be used instead of Paris green in some cases—worms on currant and gooseberry bushes, for instance. (It is not such a powerful poison as the arsenites, and would not do so well for tough insects such as potato-bugs.) Steep two ounces in one gallon of hot water, and use as a spray.

FOR SUCKING INSECTS.—Now we come to another class of insecticides, suited to insects which suck a plant's juice but do not chew. Arsenic will not kill such pests; therefore we must resort to solutions which kill by *contact*.

KEROSENE EMULSION.—One-half pound of hard or one quart of soft soap; kerosene, two gallons; boiling soft water, one gallon. If hard soap is used, slice it fine and dissolve it in water by boiling; add the boiling solution (away from the fire) to the kerosene, and stir or violently churn for from five to eight minutes, until the mixture assumes a creamy consistency. If a spray pump is at hand, pump the mixture back upon itself with considerable force for about five minutes. Keep this as a stock. *It must be further diluted with water before using.* One part of emulsion to fifteen parts of water, is about right for lice.

CARBOLIC ACID EMULSION.—Made by dissolving one pound of hard soap or one quart of soft soap in a gallon of boiling water, to which one pint of *crude* carbolic acid is added, the whole being stirred into an emulsion. One part of this is added to about thirty-five parts of water and poured around the bases of the plants, about four ounces per plant at each application, beginning when the plants are set out and repeated every week or ten days until the last of May. Used to fight maggots.

WHALE-OIL SOAP SOLUTION.—Dissolve one pound of whale-oil soap in a gallon

of hot water, and dilute with about six gallons of cold water. This is a good application for aphis (lice) on trees or plants. For oyster-shell or scurvy scale use this spray in May or June or when the tiny scale lice are moving about on the bark.

TOBACCO TEA.—Place five pounds of tobacco stems in a water-tight vessel, and cover them with three gallons of hot water. Allow to stand several hours; dilute the liquor by adding about seven gallons of water. Strain and apply. Good for lice.

LIME-SULPHUR MIXTURE.—Slake twenty-two pounds of fresh lump lime in the vessel in which the mixture is to be boiled, using only enough water to cover the lime. Add seventeen pounds of sulphur (flowers or powdered), having previously mixed it in a paste with water. Then boil the mixture for about an hour in about ten gallons of water, using an iron but not a copper vessel. Next add enough more water to make, in all, fifty gallons. Strain through wire sieve or netting, and apply while mixture is still warm. A good, high-pressure pump is essential to satisfactory work. Coat every particle of the tree. This is the standard San Jose scale remedy, although some orchardists prefer to use the soluble oil sprays now on the market.

PYRETHRUM, OR PERSIAN INSECT POWDER.—It may be dusted on with a powder bellows when the plants are wet; or one ounce of it may be steeped in one gallon of hot water, and sprayed on the plants at any time. It is often used on flowers, in greenhouses, on vegetables, etc.

BISULPHIDE OF CARBON.—This is used to kill weevils in beans and peas, etc. It comes in liquid form and may be had of druggists. When exposed to the air it quickly vaporizes into a poisonous and explosive gas which is heavier than air and which will destroy all insect life. **(Caution.—Do not inhale the vapor, and allow no lights near.)**

Tobacco stems, tobacco dust, kainit, soot, freshly-slaked lime, dust, etc., are often used as insect *preventives*—in the soil around plants to keep away grubs, worms and maggots, or dusted on to discourage the visits of cucumber bugs etc. (Note.—The first four are excellent fertilizers as well as insect preventives.)

Crows and blackbirds frequently pull up planted corn. The best preventive is to tar the seed, as follows: Put the seed into a pail and pour on enough warm water to cover it. Add a teaspoonful of coal-tar to a peck, and stir well. Throw the seed out on a sieve or in a basket to drain, and then stir in a few handfuls of land plaster (gypsum), or air-slaked lime.

A NEW FUNGICIDE.—Some orchardists are now using the following self-boiled lime-sulphur spray, instead of Bordeaux, claiming that it is less liable to spot or burn fruit and foliage: Put eight pounds of unslaked lump lime in a barrel; add enough water to cover. When the lime begins to heat, throw in eight pounds of flowers of sulphur. Constantly stir and gradually pour on more water until the lime is all slaked; then add the rest of the water to cool the mixture. About fifty gallons of water, in all, are required. Strain. Two pounds of arsenate of lead may be added, if desired, to the finished mixture, which then becomes a combined fungicide *and* insecticide, and may be used in the same manner as advised for Bordeaux-arsenate of lead. (Special note.—The self-boiled mixture is *not* the same as the lime-sulphur advised for San Jose scale, which is too strong for trees in foliage.)

If you do not care to bother with making spraying mixtures at home, they can be purchased, already prepared, of seedsmen. For only a few trees or plants, the extra cost of these factory mixtures is not great.

SPRAYING CALENDAR

Plant	First Application	Second Application
APPLE ..... (*Scab, rot, rust, codling moth, bud moth, tent caterpillar, canker worm, curculio, etc.*)	When buds are swelling, but before they open, Bordeaux.	If canker worms are abundant just before blossoms open, Bordeaux-arsenical mixture.
ASPARAGUS ..... (*Rust, beetles.*)	Cut off all shoots below surface regularly until about July 1st.	After cutting ceases, let the shoots grow and spray them with Bordeaux-arsenical mixture.
BEAN ..... (*Anthracnose, leaf blight, weevil, etc.*)	Treat the seed before planting with bisulphide of carbon. (See remarks.) When third leaf expands, Bordeaux.	10 days later, Bordeaux.
CABBAGE ..... (*Worms, lice, maggots, etc.*)	Pyrethrum or insect powder.	7-10 days later, repeat.
CELERY ..... (*Blight, rot, leaf spot, rust, caterpillars.*)	Half strength Bordeaux on young plants in hotbed or seedbed.	Bordeaux, after plants are transplanted to field. (Pyrethrum for caterpillars if necessary.)
CHERRY ..... (*Rot, aphis, slug, curculio, black knot, leaf blight, or spot, etc.*)	As buds are breaking, Bordeaux; when aphis appear, tobacco solution or kerosene emulsion.	When blossoms drop, Bordeaux-arsenical mixture.
CURRANT ..... GOOSEBERRY ..... (*Worms, leaf blight.*)	At first appearance of worms, hellebore.	10 days later, hellebore. Bordeaux if leaf blight is feared.
GRAPE ..... (*Fungous diseases, Rose bugs, lice, flea, beetle, leaf hopper, etc.*)	In spring, when buds swell, Bordeaux.	Just before flowers unfold, Bordeaux-arsenical mixture.
MELONS ..... CUCUMBERS ..... (*Mildew, rot, blight, striped bugs, lice, flea beetle, etc.*)	Bordeaux, when vines begin to run.	10-14 days repeat. (Note: Always use half strength Bordeaux on watermelon vines.)
PEACH ..... (*Rot, mildew, leaf curl, curculio, etc.*)	As the buds swell, Bordeaux.	When fruit has set, repeat. Jar trees for curculio.
PEAR AND QUINCE .... (*Leaf blight, scab, psylla, codling moth, blister mite, slugs, etc.*)	As buds are swelling, Bordeaux.	Just before blossoms open, Bordeaux. Kerosene emulsion when leaves open for psylla, if needed.
PLUM ..... (*Curculio, black knot, leaf blight, brown rot, etc.*)	When buds are swelling, Bordeaux.	When blossoms have fallen, Bordeaux-arsenical mixture. Begin to jar trees for curculio.
POTATO ..... (*Flea beetle, Colorado beetle, blight rot, etc.*)	Spray with Paris green and Bordeaux when about 4 in. high.	Repeat before insects become numerous.
TOMATO ..... (*Rot, blight, etc.*)	When plants are 6 in. high, Bordeaux.	Repeat in 10-14 days. (Fruit can be wiped if disfigured by Bordeaux.)

Note.—For San Jose scale on trees and shrubs, spray with the lime-sulphur mixture in autumn after leaves fall, or (preferably) in early spring, before buds start. The lime-sulphur

SPRAYING CALENDAR

Third Application.	Fourth Application.	Remarks.
When blossoms have fallen. Bordeaux-arsenical mixture.	8-12 days later, Bordeaux - arsenical mixture.	For aphis (lice) use one of the lice remedies mentioned elsewhere. Dig out borers from tree trunks with knife and wire. For oyster-shell scale, use whale-oil soap spray in June.
2-3 weeks later, Bordeaux-arsenical mixture.	Repeat in 2-3 weeks.	Mow vines close to ground when they are killed by frost, burn them, and apply a mulch of stable manure.
14 days later, Bordeaux.	14 days later, Bordeaux.	For weevils: Put seed in tight box, put a cloth over seed, pour bisulphide of carbon on it, put lid on and keep closed for 48 hours. Use 1 oz. to 4 bus. of seed.
7-10 days later, repeat.	Repeat every 10-14 days until crop is gathered.	Root maggots: Pour carbolic acid emulsion around stem of plants. Club root: Rotate crops; apply lime to soil; burn refuse; treat seed with formalin before planting.
14 days later, repeat.	14 days later, repeat.	Rot or rust is often caused by hilling up with earth in hot weather. Use boards for summer crop. Pithy stalks are due to poor seed; or lack of moisture.
10-14 days, Bordeaux.	Hellebore, if a second brood of slugs appear.	Black knot: Dark fungous-looking bunches or knots on limbs. Cut off and burn whenever seen.
10-14 days, repeat, if necessary.	2 to 4 weeks later, repeat.	Cane-borers may be kept in check by cutting out and burning infested canes.
When fruit has set, Bordeaux - arsenical mixture.	2 to 4 weeks later, Bordeaux.	For lice, use any of the lice remedies. For rose bugs, use 10 pounds of arsenate of lead and one gallon of molasses in 50 gallons of water, as a spray. Or knock the bugs into pans of kerosene every day.
10-14 days, repeat.	10-14 days, repeat.	Use lice remedies for lice. For striped bugs, protect young plants with a cover of mosquito netting over each hill. Or keep vines well dusted with a mixture of air-slaked lime, tobacco dust and a little Paris green.
When fruit is one-half grown, Bordeaux.	Note:—It is safer always to use half-strength Bordeaux on peach foliage.	Dig out borers. Cut down and burn trees affected with "yellows."
After blossoms have fallen. Bordeaux-arsenical mixture.	8-12 days later, repeat.	Look out for "fire blight." Cut out and burn blighted branches whenever seen.
10-14 days later, repeat.	10-20 days later, Bordeaux.	Cut out black knot whenever seen.
Repeat for blight, rot and insects.	Repeat.	To prevent scabby tubers, treat the seed with formalin before planting.
Repeat in 10-14 days.		Hand-pick tomato worms.

mixture is a fungicide as well as a scale cure, and if it is used the *first* early Bordeaux spray may be omitted.

PLANTING TABLE FOR VEGETABLES AND BERRIES—Continued

VARIETY	For Horse Cultivation Have Rows	For Hoe or Wheel-Hoe Cultivation Have Rows	Distance Apart in the Row	Depth to Cover	Time to Plant in the North, Outdoors (See Foot-note)
ONION, Seed	2½ ft. apart	12-15 in. apart	Thin to 4 in.	½ in.	March-April
PARSLEY	2½ ft. apart	1 ft. apart	Thin to 6 in.	½ in.	Early April
PARSNIP	2½ ft. apart	1 ft. apart	Thin to 5 in.	½ in.	March-April
PEPPER, Plants	2½ ft. apart	2 ft. apart	20 in.		June 1
PEAS	3-4 ft. apart	2½-3 ft. apart	Continuous row	3-5 in.	March-April
POTATO	3 ft. apart	2-2½ ft. apart	12-18 in.	4 in.	Early, March-April; late, May-June
RADISH	2½ ft. apart	1 ft. apart	Thin to 3 in.	½ in.	March-April
RHUBARB, Plants	4 ft. apart	3 ft. apart	3 ft.	2 or 3 in.	March-April
RASPBERRY, Plants	6 ft. apart	5 ft. apart	Red, 2 ft. Black, 2½ ft.		Early spring
SPINACH	2½ ft. apart	1 ft. apart	Thin to 5 in.	1 in.	March-April (or fall)
SQUASH-PUMPKIN	8 x 8 ft. (Bush Squash 4 x 4)	Same		½ in.	May 15-20
STRAWBERRY Plants	4 ft. apart	3 ft. apart	15-20 in.	Have crown level with ground	April. (Pot-grown plants in August)
TOMATO, Plants	4 x 4 ft. apart	4 x 3 ft. apart			May 25-June 1

NOTE.—Planting time varies according to season and locality; dates given above are only approximate, and are based on latitude of Pennsylvania; allow about five days difference for each 100 miles north or south of this State. Do not work soil in spring while it is very wet and soggy; wait. Plants set in autumn must be well mulched with strawy manure, leaves, etc., during first winter. Successional sowings of corn, peas, etc., may be made later than the dates given.

FARMERS' BULLETINS

Sent Free to Residents of the United States, by Department of Agriculture Washington, D. C., on Application.

NOTE.--Some numbers omitted are no longer published. Bulletins in this list will be sent free, so long as the supply lasts, to any resident of the United States, on application to his *Senator, Representative, or Delegate in Congress*, or to the Secretary of Agriculture, Washington, D. C. Because of the limited supply, applicants are urged to select only a few numbers, choosing those which are of special interest to them. Residents of foreign countries should apply to the Superintendent of Documents, Government Printing Office, Washington, D. C., who has these bulletins for sale. Price, 5 cents each to Canada, Cuba, and Mexico: 6 cents to other foreign countries.

22. The Feeding of Farm Animals.
27. Flax for Seed and Fiber.

A PROSPEROUS INDIANA FARM.

Madison County Directory

ABBREVIATIONS.—a, means acres; h, horse; c, cow; bds, boards; Tel, telephone; 4 ch, 4 children; H&L, house and lot; Ada 19, Adams Township, Road No. 19 (see map); O, owns; R1, Rural Route No. 1; ret, retired; T, tenant.

The abbreviations used for the Townships of Madison County are as follows:

Adams, Ada.	Lafayette, Laf.
Anderson, And.	Monroe, Mon.
Boone, Bne.	Pipe Creek, Pi Cr.
Duck Creek, Dk Cr.	Richland, Rich.
Fall Creek, Fl Cr.	Stony Creek, Sy Cr.
Green, Gre.	Union, Un.
Jackson, Jack.	Van Buren, Vn Bu.

Names in bold face are those of Farm Journal subscribers—always the most intelligent and progressive people in any county. No Tumbledowns, for no farmer can keep on reading the F. J. and being a Tumbledown, too. Many have tried, but all have to quit one or the other.

STEIN & CANADY

Furniture, Carpets, Stoves

and House Furnishers

1201-1207 MERIDIAN STREET ANDERSON, IND.

Home of better furniture signifies this, that when we say it is oak, it is oak. The great hardship in buying is to know what firm you can place confidence in.

We stand behind everything we sell, and our motto is this: Better furniture for less money.

If at any time your purchases are not satisfactory we cheerfully refund your money.

We have one of the largest lines of Furniture, Rugs, Linoleums, Stoves and Victrolas to be found in this County.

Once a customer, always a customer.

Cow Ailments and How to Treat Them

(From the Biggle Cow Book)

Let sick or maimed animals lie still. Do not torture them by trying to get them up. Rub their limbs every day and keep a soft bed under them. They will get up when they are able.

If a cow look poor and weak, put a blanket on her, keep her in a warm place, and feed her some corn meal and middlings, and some oats. Give her warm drink, and stir a little cheap flour in it. Do not let her run clear down. Look ahead.

If cows are accidentally left out in a rain and seem cold, put them in the stable as soon as possible and rub them well. If they shiver, put blankets on them until they are dry. If there is inflammation or hardness in the udder, bathe it thoroughly for at least half an hour, and rub gently until thoroughly dry.

If this does not effect a cure put a *warm* flaxseed poultice on the udder, which can be held in place by means of an eight-tailed bandage. This should be changed twice a day until the hardness and soreness are gone. Of course, the cow should be milked out two or three times each day.

If a cow get a foreign body in the mouth turn her head towards the light and remove it.

When chaff or other dirt gets into the eye syringe or sponge the eye frequently with clean cold water containing sulphate of zinc one grain to each ounce of water. Keep stable darkened.

For Choking, examine throat and neck; if offending object is felt, attempt to force upward into the mouth by pressure of hands below the object. Give one pint linseed oil or melted lard. May sometimes reach with hand by holding tongue aside. Do not push a stiff stick or fork handle down the throat; a piece of rubber hose, well greased, is less likely to ruin the cow.

If a cow has Bloat or Hoven there will be a drum-like swelling on left side in front of hip, caused by green food, wet or frosted clover, overfeeding, choking. Give one-half teacupful table salt in water, as drench. Exercise. If not relieved give aromatic spirits of ammonia, two ounces, well diluted, every hour.

Where there is great danger of suffocation a puncture of the paunch may be made with a knife at a point, equally distant from the point of hip and last rib, on *left side of cow.*

Impaction of Paunch is caused by overeating, and the symptoms are failing appetite, solid or doughy swelling on front of left hip. Give one to two pounds Glauber salts dissolved in water; follow every three hours by drench of mixture of equal parts common salt, nux vomica powdered and capsicum. Dose, one tablespoonful.

In Colic the symptoms are uneasiness, striking belly with hind legs, lying down and getting up. Cause, change of diet, rapid feeding. Give Glauber salts, one pound in water; warm water enemas. Give every hour one ounce each of laudanum and sulphuric ether, diluted.

Constipation caused by dry, coarser food and lack of exercise, is treated with green food, linseed meal and exercise; give pint of raw linseed oil. Diarrhœa is treated with starch gruel or flour and water and dry food.

Scours in calves is caused by overfeeding, bad food or drink, damp stables, dirty surroundings. Remove cause and withhold food the best remedy. Give once daily twenty grains potassium permanganate in tincup of water; also use same for enema.

Cows are subject to Founder, showing sudden tenderness in two or more feet; feet hot and may crack around top of hoof. This comes from overfeeding. Give Glauber salts one pound, twenty drops tincture aconite every two hours. Keep feet moist by wet pasture or wet cloths.

Garget or Swollen Udder, due to cold, injuries, overfeeding or heating food. Bathe frequently with warm water; dry, and apply warm lard. Milk often. Give internally two-drachm doses salicylic acid and one drachm soda bicarbonate in one pint of milk four times daily.

Discharge of Mucus from nostrils indicates catarrh from exposure, dust, or pollen of plants. Allow animal to breathe steam from water containing pine tar.

In Sore Throat there is difficulty in swallowing, food returns through nostrils. Steam as in catarrh, give tincture belladonna one-half ounce every six hours. Rub throat with equal parts turpentine and sweet oil.

In Bronchitis there is dry cough first,

Cow Ailments and How to Treat Them

(Cows on Farm Cow Dairy)

Let sick or injured animals be well. Do not permit them to spring to you from up. Put them under every day and keep ... and let under them. They will get by when they are alive.

If a cow ... a ... ... on ... ... the ... and ...

When ... on ... ... the ... ...

then loose, and discharge from nostrils; rattling sound in windpipe. Steam as in sore throat and give tincture aconite twenty drops every two hours and two drachms muriate ammonia in one pint of water three times daily. For bronchitis in young stock due to worms in windpipe, which sometimes occur in autumn where they are pastured late, give one ounce turpentine and six ounces sweet oil well mixed three times a week. Take from pasture and feed liberally.

In PNEUMONIA there is loss of appetite, animal standing, rapid breathing, pulse frequent, extremities cold. Cause, exposure or neglected bronchitis. Place in a warm, dry, well-ventilated stable, apply to chest equal parts turpentine and alcohol and cover with blanket. In beginning give tincture aconite twenty drops every hour. If not better in two days discontinue aconite and give one ounce tr. digitalis every eight hours.

In PLEURISY there is fever with rapid pulse, animal stands, grunts on moving or when chest is struck, has a short painful cough. Treat same as for pneumonia; give also one drachm iodide of potash twice daily.

SORE TEATS are caused by scratches from briers, bites of insects, dirt exposure, also from the contagion of cow pox at milking. Remove cause and use milk tube if necessary; apply to sores after milking small quantity of mixture glycerine four ounces and carbolic acid one drachm. In cow pox milk affected cow last and apply to sores mixture glycerine four ounces, water eight ounces, chloride of zinc twenty grains.

WARTS on teats or other parts are generally easily removed by sharp scissors; dress wound as advised for sore teats.

MANGE causes great itching and generally starts at root of tail or top of neck; cause, a minute parasite. Wash with soap and water and dry, after which apply lard which destroys the parasite.

For LICE and TICKS apply daily a tea made by adding one pound quassia chips to three gallons of boiling water. Ordinary sheep dip is also effective. Carbolic acid is one of the most effective agents against parasites. It should have a dilution of about one hundred times its bulk of water. Kerosene emulsion is good for lice on cattle, killing both adults and eggs. To make, dissolve one-half pound hard soap in one gallon hot water and while still near the boiling point add two gallons kesosene oil, Churn or agitate until emulsified. Use one part of this emulsion to eight or ten parts of water and use as a spray, wash or dip.

In RINGWORM there are circular spots of baldness covered by gray or yellow crust; caused also by a parasite. Wash with strong soap and water and apply pure creolin once daily for a week.

FOUL CLAW or HOOF DISTEMPER causes lameness in one or more feet, swelling and heat around top of hoof, and bad smelling discharge around edge of hoof and between the claws. Cause, dirty stables, standing in stagnant water or mud. Trim off all loose horn, clean by wiping with dry rags, wet sores twice daily with mixture chloride of zinc one ounce, water one pint.

OVERGROWTH OF HOOF from standing in stable should be filed off with rasp.

SPRAINS (generally below knee or hock), causing heat and lameness with tenderness at point of injury, should be bathed with warm water or with laudanum three parts, lead water one part.

WOUNDS, if bleeding much, fill or cover the wound with clean cotton dipped in cold or quite warm water, and secure firmly with bandage; examine for foreign bodies, as splinters, nails and dirt. Do not fill wound with cobwebs to stop bleeding. Remove the bandage before swelling takes place; one application of bandage usually enough. Keep animal quiet first day, then allow exercise. Keep wound clear and apply carbolic acid water 5 per cent. or creolin and water 1 to 10. Do not apply grease to wounds. If proud flesh forms apply daily enough powdered burnt alum to cover.

For an ABSCESS or cavity containing pus caused by bruises, etc., open freely and syringe with 10 per cent. creolin solution.

LOCKJAW, a constant muscular spasm involving more or less the entire body, is caused by the entrance of tetanus germs through a wound. There is stiffness of whole or part of body, more frequently the jaws, making eating difficult or impossible. If animal can drink give one-half ounce doses bromide potash five times daily; dissolve and place on food or gruel or in water given to drink. Do not drench, and keep quiet.

INVERSION OF VAGINA most frequent in springers, caused most frequently by stalls too low behind. Treat displaced parts with warm water and replace them.

[illegible] and the large [illegible] [illegible] trailing around in wonderful [illegible] [illegible] and give [illegible] [illegible] [illegible]

Place cow in stall eight inches higher behind than in front until after calving.

INVERSION OF WOMB occurs after calving, same cause as above and treatment the same; get womb placed well forward.

STERILITY in bull is sometimes caused by high feeding and lack of exercise. Give nux vomica one drachm and capsicum one-half drachm once daily. In cow may be temporary, following abortion; if from other cause, seldom recover. Try same remedy as for bull.

ABORTION is a frequent and troublesome malady, occurring generally at about seventh or eighth month. Cause may be due to injuries or to contagion. Separate at once when suspected; after calf is born syringe the womb with one gallon of warm water containing one ounce creolin. Repeat daily as long as any discharge is seen. Afterbirth should be removed about third day after calving. Disinfect stables thoroughly. Do not let cow take bull for at least two months after aborting.

RETAINED AFTERBIRTH is generally due to premature birth; should be removed on third or fourth day. Blanketing, warm stable, warm drinks may help. If necessary to remove by hand, should only be attempted by qualified person, otherwise it is advisable to allow it to remain.

INFLAMMATION OF THE WOMB is indicated by fever, loss of appetite, straining. Caused by injuries in calving or to attempts at removal of afterbirth, and is generally fatal. Give two drachms salicylate of soda every four hours and syringe womb with warm water and two ounces creolin to the gallon.

MILK FEVER or PARTURIENT APOPLEXY is usually treated by inflation of the udder with air. Doubtless a regular "milk fever outfit," costing about $3, is best to use, as it precludes the possibility of infecting the sensitive interior of the udder. But in emergency, or in case the outfit is not procurable, the udder may be inflated by using a bicycle or automobile air pump, taking pains to be sure the air used is pure. If in a stable, ventilate it well.

Attach a milking tube to the tubing of the pump, first dipping it in a carbolic solution (carbolic acid three teaspoons, water one pint). Wash each teat carefully with this antiseptic, before inflating it, so as to prevent infection. Insert the milking tube carefully. Work slowly.

Of course the udder must not be inflated unreasonably. After inflation, remove the tube and leave the udder full of air for five to eight hours. Then the air may be worked out gently, and, if necessary, the inflation may be repeated.

Cows so treated usually show marked signs of improvement within two hours.

ACTINOMYCOSIS (LUMP JAW) is a contagious disease due to a germ known as "Ray fungus." There are well-defined swellings about the jaw, head and throat, or may be on the tongue or in the lungs. These soften and open after a time and discharge matter; appetite good until well advanced. The treatment is, remove by surgical means; late experiments indicate iodide of potash two to three drachms daily to be a cure. Advanced cases should be killed at once. The meat should never be used for food.

MILK SICKNESS (TREMBLES) is a disease of cattle communicable to man and other animals by use of meat or milk; dry cattle most commonly and far more severely affected. Milch cows may transmit this disease through the use of their milk and yet show no trace of the disease themselves. The symptoms are trembling upon least exertion as walking, great prostration and delirium. Treatment is only prevention; do not use pastures known to produce this disease; unbroken land of certain districts unsafe.

RHEUMATISM is shown by hot, painful swellings at the joints, generally the hocks, stiffness in walking or may be unable to rise. Bathe joints with camphor and alcohol and give internally two drachms salicylate of soda every three hours until four ounces have been given; keep warm and dry and give laxative food.

TEXAS FEVER, a disease of Southern cattle which, when transmitted to Northern cattle, is generally fatal in a few days. The spread of the disease is generally due to ticks; those from diseased animals contain the germs of the disease and by their bites transmit it. The indications are a high fever, staggering gait, urine of reddish brown to black, great prostration, unconsciousness, death. Most common in summer months; unknown in the north after heavy frost. Prevention, avoidance of cattle from Southern fever districts; dipping of Southern cattle to destroy the ticks.

Poultry Diseases and Enemies

(From the Biggle Poultry Book)

Many of the ills that poultry flesh is heir to are directly traceable to bad breeding and treatment. In-and-in-breeding is practiced and the law of the survival of the fittest is disregarded until the stock becomes weak and a prey to disease.

Yards and runs occupied for any considerable time become covered with excreta and a breeding ground for all manner of disease germs.

Dampness from leaky roofs or from wet earth floors, and draughts from side cracks, or from overhead ventilation slay their thousands yearly.

A one-sided diet of grain, especially corn, moldy grain or meal, decayed meat or vegetables, filthy water, or the lack of gritty material are fruitful sources of sickness.

In the treatment of sick birds much depends on the nursing and care. It is useless to give medicine unless some honest attempt be made to remove the causes that produce the disturbance. Unless removed the cause will continue to operate and the treatment must be repeated.

It is an excellent plan to have a coop in some secluded place to be used exclusively as a hospital. If cases cannot be promptly treated it is better to use the hatchet at once and bury deeply, or burn the carcasses. This is the proper plan in every case where birds become very ill before they are discovered.

Sick birds should in no case be allowed to run with the flock and to eat and drink with them.

In giving the following remedies we make no pretence to a scientific handling of the subject.

Fevers, from colds, fighting of cocks, etc. Symptoms: unusual heat of body, red face, watery eyes and watery discharge from nostrils.

Give dessertspoonful citrate of magnesia and, as a drink, ten drops of nitre in half a pint of water.

Apoplexy and Vertigo, from overfeeding or fright. Symptoms: unsteady motion of the head, running around, loss of control of limbs. Give a purgative and bleed from the large veins under wing.

Paralysis, from highly seasoned food and over stimulating diet. Symptoms: inability to use the limbs, birds lie helpless on their side. Treatment—The same as for apoplexy.

Leg Weakness occurs in fast-growing young birds, mostly among cockerels. A fowl having this weakness will show it by squatting on the ground frequently and by a tottering walk. When not hereditary it usually arises from a diet that contains too much fat and too little flesh and bone-making material, such as bread, rice, corn and potatoes. To this should be added cut green bone, oats, shorts, bran and clover, green or dry. Give a tonic pill three times a day made of sulphate of iron, 1 grain; strychnine, 1 grain; phosphate of lime, 16 grains; sulphate of quinine, ½ grain. Make into thirty pills.

Canker of the Mouth and Head.—The sores characteristic of this disease are covered with a yellow cheesy matter which, when it is removed, reveals the raw flesh. Canker will rapidly spread through a flock, as the exudation from the sores is a virulent poison, and well birds are contaminated through the soft feed and drinking water. Sick birds should be separated from the flock and all water and feed vessels disinfected by scalding or coating with lime wash. Apply to sores with a small pippet syringe or dropper the peroxide of hydrogen. When the entire surface is more or less affected, use a sprayer. Where there is much of the cheesy matter formed, first remove it with a large quill before using the peroxide. A simple remedy is an application to the raw flesh of powdered alum, scorched until slightly brown.

Scaly Leg, caused by a microscopic insect burrowing beneath the natural scales of the shank. At first the shanks appear dry, and a fine scale like dandruff forms. Soon the natural scale disappears and gives place to a hard, white scurf. The disease passes from one fowl to another through the medium of nests and perches, and the mother-hen infecting her brood. To prevent its spread, coat perches with kerosene and burn old nesting material and never use sitting hens affected by the disease. To cure, mix ½ ounce flowers of sulphur, ¼ ounce carbolic acid crystals and stir these into 1 pound of melted lard. Apply with an old tooth brush, rubbing in well. Make applications at intervals of a week.

Worms in the intestines of fowls indicate disturbed digestion. Loss of appetite and lack of thrift are signs of their presence. Give santonin in 2-grain doses

Poultry Diseases and Enemies

(From the Eagle Poultry Book.)

Many of the ills that poultry flesh is heir to are directly traceable to bad breeding and treatment. In-and-in-breeding is practiced and the law of the survival of the fittest is disregarded until the flock becomes weak and a prey to disease.

Yards and runs occupied for any considerable time become infected with disease and a fertile ground for all manner of disease germs.

Dampness from leaky roofs or from wet earth floors, and draughts from cold cracks or from overhead ventilation, also invite disease.

A one-sided diet of grain, especially corn, moldy grain or meal, decayed meat or vegetables, filthy water, or the lack of gritty material are fruitful sources of sickness.

In the treatment of sick birds much depends on the nursing and care. It is useless to give medicine unless some means are taken to remove the causes that produced the disturbance. Unless removed the cause will continue to operate and the treatment must be repeated.

It is an excellent plan to have a coop in some secluded place to be used exclusively as a hospital. If cases cannot be promptly treated it is better to use the hatchet at once and bury deeply or burn the carcasses. This is the proper plan in every case where birds become very ill before they are discovered.

Sick birds should in no case be allowed to run with the flock and to eat and drink with them.

In giving the following remedies we make no pretense to a scientific handling of the subject.

Fever, from colds, fighting of cocks, etc. Symptoms—unusual heat of body, red face, watery eyes and watery discharge from nostrils.

Give homeopathic tincture of aconite, ten drops of tincture in half a pint of water.

Apoplexy and Vertigo, from overfeeding or fright. Symptoms—unsteady motion of the bird, running around, loss of control of limbs. Give a purgative and bleed from the large veins under wing.

Paralysis, from highly seasoned food and over stimulating diet. Symptoms—inability to use the limbs, birds lie helpless on their side. Treatment—The same as for apoplexy.

Leg Weakness occurs in fast-growing young birds, usually among cockerels. A fowl having this weakness will show it by squatting on the ground frequently and by a tottering walk. When not hereditary it usually arises from a diet that contains too much fat and too little flesh and bone-making material, such as bread, rice, corn and potatoes. To this should be added cut green bone, cooked meat, bran and clover, green or dry. Give a tonic pill three times a day made of sulphate of iron, 1 grain; strychnine, 1 grain; phosphate of lime, ½ grain; sulphate of quinine, ½ grain; making two tonic pills.

Canker of the Mouth and Head.—The main characteristic of this disease is the covering with a yellow cheesy matter which, when it is removed, reveals the raw flesh. Canker will rapidly spread through a flock as the exudation from the sores is a virulent poison, and well birds are contaminated through the soft feed and drinking water. Sick birds should be separated from the flock and all water and feed vessels disinfected by washing or scalding with boiling water. Apply to sores with a small glass syringe or dropper the peroxide of hydrogen. Where the sore surface is more or less affected, use a sponge. Where there is much of the cheesy matter formed, first remove it with a large quill before using the peroxide. A simple remedy is an application to the raw flesh of powdered alum, applied until slightly bleeding.

Scaly Leg, caused by a microscopic insect burrowing beneath the natural scales of the shanks. At first the shanks appear dry, and a fine scale-like powdery matter forms; the natural scale loosens and gives place to a hard white scurf. The disease passes from one fowl to another through the medium of nests and perches, and the mother-hen infecting her brood. To prevent its spread, coat perches with kerosene and burn old nesting material and never use straw from nests affected by the disease. For cure, take 1 ounce flowers of sulphur, ½ ounce carbolic acid crystals and mix these into 1 pound of melted lard. Apply with an old tooth brush, rubbing in well. Make applications at intervals of a week.

Worms in the intestines of fowls indicate disordered digestion. Loss of appetite and lack of thrift are signs of their presence. Give santonin in 2-grain doses

six hours apart. A few hours after the second dose give a dessertspoonful of castor oil. Or, put 15 drops of spirits of turpentine in a pint of water and moisten the feed with it.

Bumble-foot, caused by a bruise in flying down from perches or in some similar manner. A small corn appears on the bottom of the foot, which swells and ulcerates and fills with hard, cheesy pus. With a sharp knife make a cross cut and carefully remove all the pus. Wash the cavity with warm water, dip the foot in a solution of one-fourth ounce sulphate of copper to a quart of water and bind up with a rag and place the bird on a bed of dry straw. Before putting on the bandage anoint the wound with the ointment recommended for scaly leg or coat it with iodine.

Gapes, caused by the gape-worm, a parasite that attaches itself to the windpipe, filling it up and causing the bird to gasp for breath. The worm is about three-fourths of an inch long, smooth and red in color. It appears to be forked at one end, but in reality each parasite is two worms, a male and female, firmly joined together. This parasite breeds in the common earth worm. Chicks over three months old are seldom affected. If kept off of the ground for two months after hatching, or on perfectly dry soil, or on land where affected chicks have never run, chicks will seldom suffer from the gapes. Old runs and infested soil should have frequent dressings of lime.

In severe cases the worms should be removed. To do this put a few drops of kerosene in a teaspoonful of sweet oil. Strip a soft wing feather of its web to within an inch of the tip, dip in the oil, insert feather in windpipe, twirl and withdraw. Very likely some of the parasites and mucus will come with it. The rest will be loosened or killed, and eventually thrown out. It may be necessary to repeat the operation.

To kill the worm in its lodgment, gum camphor in the drinking water or pellets of it as large as a pea forced down the throat is recommended. Turpentine in the soft feed, as advised in the treatment for worms in the intestines, is said to be effective. Pinching the windpipe with the thumb and finger will sometimes loosen the parasite.

When broods are quartered on soil known to be infested, air-slacked lime should be dusted on the floor of the coop, and every other night, for two or three weeks, a little of the same should be dusted in the coop over the hen and her brood. To apply, use a dusting bellows and only a little each time.

Cholera is due to a specific germ, or virus, and must not be confounded with common diarrhœa. In genuine cholera digestion is arrested, the crop remains full, there is fever and great thirst. The bird drinks, but refuses food and appears to be in distress. There is a thickening of the blood, which is made evident in the purple color of the comb. The discharges from the kidneys, called the urates, which in health are white, become yellowish, deep yellow, or, in the final stages, a greenish-yellow. The diarrhœa grows more severe as the disease progresses. A fowl generally succumbs in two days. The virus of cholera is not diffusible in the air, but remains in the soil, which becomes infected from the discharges, and in the body and blood of the victims. It may be carried from place to place on the feet of other fowls or animals. Soil may be disinfected by saturating it with a weak solution of sulphuric acid in water. Remove at once all well birds to new and clean quarters and wring the necks of all sick birds and burn their carcasses and disinfect their quarters.

For cases not too far gone to cure give sugar of lead, pulverized opium, gum camphor, of each, 60 grains, powdered capsicum (or fluid extract of capsicum is better, 10 drops), grains, 10. Dissolve the camphor in just enough alcohol that will do so without making it a fluid, then rub up the other ingredients in the same bolus, mix with soft corn meal dough, enough to make it into a mass, then roll it and divide the whole into one hundred and twenty pills. Dose, one to three pills a day for grown chicks or turkey, less to the smaller fry. The birds that are well enough to eat should have sufficient powdered charcoal in their soft feed every other day to color it slightly, and for every twenty fowls five drops of carbolic acid in the hot water with which the feed in moistened.

Roup.—The first symptoms are those of a cold in the head. Later on the watery discharge from the nostrils and eyes thickens and fills the nasal cavities and throat, the head swells and the eyes close up and bulge out. The odor from affected fowls is very offensive. It is contagious by diffusion in the air and by contact with the exudations from sick fowls. To disinfect houses and coops burn sulphur and carbolic acid in

the Scout Spare. A few hours after the second day are a disappointment of season not. Or, put it down to lack of preparation in a pot of water and morsels the dried grub at.

Burning-root, cooked by a boiling in five big slices from yesterday or in some one for instance. A small root appears on the bottom of the food which, mixed and diversity and life was lost, thinly one. With a sharp knife make a cross on top and carefully remove all the pith. With the sharp cross sweep water, up the root in a solution of one-tenth sodium sulphate of copper to a quart of water and boil up with a rag and place the root on a bed of dry grass. Burns putting on the outdoor room the wound with the sulphate mixture recommended for scalp lip or cuts a with sodium.

Dates, cooked by the pioneering a metallic and already cited in the wind. pine follow it up and sensing the food to ying the drought. The water is about colour-lovely of an dark long, sweet and red in color. It appears to be twice as one and for is quite such pleasure is two months a week and remain lovely rolled together. The growing brook in the summer dark moss. Clothes may dries mostly and are seldom all-wool. It has of of the ground for two months after hunting, or on actually dry and or in dam where clearing where have water the dirty and sodium water from the place. Old rags and tatters and should have frequent drawings to leave.

In sunny days the water should be renewed. To do this set a free drop of harmless in a transparent of sand on. Stop and notice water factor of to wash on sodium on top of the fire, the in the all. Insert bottles in windows, tents and sodium. Very dirty sunny of the grass, sun and notice wet sodium with in. The rest will be lowered or lifted and eventually thrown out. It may be necessary to repeat the operation.

In fall are warm in the judgment, your member in the drinking water in pelvis of it as large as a can tested down the tarnet in commander. Temperature in the soil kept at a level in the immediate for water in the warmers. It said is to be effective. Directing the sunlight into the tinnel and longer will sodium before the morning.

When hunger has conquered an and leaves to be helpful an sodium time should be dissed on the floor of the crop, and every other night for two or three weeks a little of the same should be dissed in the crop over the bin and then tested. To apply one a dusting lab. lows and only a little each time.

Cooking is not to a spoiling year, or years, and must not be overcooked with economic dietitians. To prevent cooking impurities in tissues the crop frozen with there is lower and great stress. The burn drying, but reduces food and spoiled to be to dieters. There is a difference of the food, which is made spoiled to the water food of the crop. The one observes from the bottom, noted the pieces, which is both are white, because rudiments also yellow, or in the food sugar, a greenish-yellow. The dietitian finds twice twice as the dieters are growing. A food generally consumes a two days. The water of drying is an [illegible] in the air for remains is the [illegible], which between drying from the dehydrating and in the body and food of the rations. It may be noted from place is place in the fact of other foods or common. And may be dietitians by attempting a with a week dietitian at another, and in water. Dieters or and all well birds in one and drying dietitians and in the modes of all will birds and bird under dietitians and dietitians than dieters.

To dieters and for the grass to have grass amount of food, preferred foods, grass amount of food, of grass, preferred vegetables for food dried of vegetables is bread, it already, drying, it. Dieters the months in fact growth at food that will do as sodium dried is a food then run up the water fragments in the water food, dry with soil, over food dough, sponge to make in time a cake, then rail is and dried the whole time are treated for twenty pills. Dieters in fairy pills a day for grown sunny or years, less to the market for. The fresh time are well enough to all about have, [illegible] preferred dieters in their well food every other day to lose it dietitian and for every month dried fire drop of carbolic acid in the for water and which the food is [illegible].

Bury—The fire dieters are done of a soil in the sugar. Enter on the watery dietitian from the months and over dietitian and fill the wood spoiled and burns, the wood warm and the grass dried to and food. The water from dried food is very dietitian. It is changing by drying in the air and by contact with the water from soil food. To dieters burns and dieters have sodium and sodium and is

them after turning the fowls out and keep closed for an hour or two. Pour a gill of turpentine and a gill of carbolic acid over a peck of lime and let it become slaked, then scatter freely over the interior of houses and coops and about the yards.

For the first stages spray the affected flock while on the roost or in the coop with a mixture of two tablespoonfuls of carbolic acid and a piece of fine salt as big as a walnut in a pint of water. Repeat two or three times a week. Or, if a dry powder is preferred, mix equal parts of sulphur, alum and magnesia and dust this in their nostrils, eyes and throat with a small powder gun. The nasal cavities should be kept open by injecting with a glass syringe or sewing machine oil-can a drop or two of crude petroleum. A little should be introduced also through the slit in the roof of the mouth. Give sick birds a dessertspoonful of castor oil two nights in succession, and feed soft food of bran and corn meal seasoned with red pepper and powdered charcoal. A physician advises the following treatment: hydrastin, 10 grains; sulph. quinine, 10 grains; capsicum, 20 grains. Mixed in a mass with balsam copaiba and made into twenty pills; give one pill morning and night; keep the bird warm and inject a saturated solution of chlorate potash in nostrils and about 20 drops down the throat.

Pip, so-called, is not a disease but only a symptom. The drying and hardening of the end of the tongue in what is called "pip" is due to breathing through the mouth, which the bird is compelled to do because of the stoppage of the nostrils. By freeing the natural air passages the tongue will resume its normal condition.

Diphtheria is a contagious disease. The first symptoms are those of a common cold and catarrh. The head becomes red and there are signs of fever, then the throat fills up with thick, white mucus and white ulcers appear. The bird looks anxious and stretches its neck and gasps. When it attacks young chicks it is frequently mistaken for gapes. When diphtheria prevails, impregnate the drinking water with camphor, a teaspoonful of the spirits to a gallon of water, and fumigate the house as recommended for roup.

Spray the throat with peroxide of hydrogen or with this formula: 1 ounce glycerine, 5 drops nitric acid, 1 gill water. To treat several birds at once with medicated vapor, take a long box with the lid off, make a partition across and near to one end and cover the bottom with coal ashes. Mix a tablespoonful each of pine tar, turpentine and sulphur, to which add a few drops, or a few crystals, of carbolic acid and a pinch of gum camphor. Heat a brick very hot, put the fowls in the large part and the brick in the other, drop a spoonful of the mixture on the brick and cover lightly to keep the fumes in among the patients. Watch carefully, as one or two minutes may be all they can endure. Repeat in six hours if required.

Crop-Bound.—The crop becomes much distended and hard from obstruction of the passage from the crop to the gizzard by something swallowed; generally, it is long, dried grass, a bit of rag or rope. Relief may sometimes be afforded by giving a tablespoonful of sweet oil and then gently kneading the crop with the hand. Give no food, except a little milk, until the crop is emptied. Wet a tablespoonful or more of pulverized charcoal with the milk and force it down the throat. Should the crop not empty itself naturally pluck a few feathers from the upper right side of it and with a sharp knife make a cut about an inch long in the outer skin. Draw this skin a little to one side and cut open the crop. Remove its contents, being careful not to miss the obstruction. Have a needle threaded with white silk ready, and take a stitch or two in the crop skin first, then sew up the outer skin separately. Put the patient in a comfortable coop, and feed sparingly for a week on bran and meal in a moist state, and give but little water.

Soft or Swelled-Crop arises from lack of grit, or from eating soggy and unwholesome food. The distended crop contains water and gas, the bird is feverish and drinks a great deal. By holding it up with its head down the crop will usually empty itself. When this is done give teaspoon doses of charcoal slightly moistened twice at intervals of six hours. Restrict the supply of water and feed chopped onions and soft feed in moderation.

Egg-Bound, Diseases of the Oviduct. Overfat hens are often troubled in this way. Forcing hens for egg production will sometimes break down the laying machinery. Give green food, oats, little corn, and no stimulating condiments. Let the diet be plain and cooling in its

then after turning the lever out and then closed for an hour or two. Four a pint of tangerine and a gill of sulphuric acid over a pint of rum and let it be come clarified then strain away over the interior of pumice and stop and shake the pints.

For the best results using the alternat ticks with the rest of the coop with a mixture of two sulphuretts of potassic and and a spare of the salt is in a solution in a pint of rum. Ex- pect two or three days a week. Or, if a use powder is preferred, use equal parts of potassic chlorate and magnesia and this is then mixed with a little water and powder. The usual method should be first rub by mixing with a glass mixture or spatula, adding mixture a drop or two at a time of the rum. A little should be mixed at one time, and the rest of the mixture. Take care that a homogeneous mixture is obtained. Take care not to use too much of the powder, and not too much of the rum and mixture sequent with red powder and one drop of the rum. A mixture always the following proportions: 10 grains - sulph. potassic, 10 grains, chlor. potass. 10 grains, rum. Place in a mass with [illegible] and shake with [illegible] glass rod and mortar and stirr, keep the rum warm and apply a sure- ral solution of chlorate potass in mor- tar, and stirr to drain over the [illegible].

In regular, it is a mixture not only a [illegible]. The [illegible] and [illegible] of the end of the [illegible] is what is called "gas" is the [illegible] through the mouth, which the lung is [illegible] to do because of the [illegible] of the [illegible]. By [illegible] the [illegible] air [illegible] the [illegible] will [illegible] to [illegible] [illegible].

Instrument is a [illegible] [illegible]. The [illegible] are [illegible] of a [illegible] [illegible] and [illegible]. The [illegible] [illegible] [illegible]

nature. To relieve hens of eggs broken in the oviduct, anoint the forefinger with sweet oil and deftly insert and draw out the broken parts. When the hen is very fat and the egg is so large it cannot be expelled, the only way to save the hen is to break the egg and remove it as above directed.

White-Comb or Scurvy, caused by crowded and filthy quarters and lack of green food. The comb is covered with a white scurf. This condition sometimes extends over the head and down the neck, causing the feathers to fall off.

Change the quarters and diet, give a dose of castor oil and follow this with a half a teaspoonful of sulphur in the soft food daily.

Rheumatism and Cramp caused by cold and dampness. Chicks reared on bottom-heat brooders are particularly subject to these troubles. Damp earth floors and cement floors in poultry houses produce it in older birds.

Give dry and comfortable quarters, feed little meat, plenty of green food, and soft feed seasoned with red pepper.

Diarrhœa of chicks with clogging of the vent. Remove the hardened excretion and anoint the parts. Chamomilla is useful in this complaint, a few drops in drinking water.

Frosted Comb and Wattles.—As soon as discovered bathe with compound tincture of benzoin.

For Lice on perches, walls and coops, use kerosene or lime wash. To make the lime-wash more effective, pour a little crude carbolic acid on the lime before slaking or mix with plenty of salt.

For use in nests, pour crude carbolic acid on lime and allow it to air-slake. Put one or two handfuls of the carbolized lime dust in the nest box.

Pyrethrum powder kills by contact and is effective for dusting in nests, and through the feathers of birds. Its judicious use in the plumage and nests of sitting hens will insure immunity from lice for the hen and her young brood.

Chicks and poults are often killed by large lice that congregate about the head, throat, vent and wings. To destroy them, soak fish berries in alcohol, take the birds from under the mothers at night and slightly moisten the down of the infested parts with the poison.

How to Preserve Eggs

Now that eggs are dearer as a rule than they have been for years, many people are inquiring about the methods of preserving them. The old way was to pack them in salt or lime. This served the purpose, but it gave the eggs a very strong taste.

The approved method now is the one which calls for the use of "water glass," or silicate of soda. This is a thick, syrupy liquid which can be had at most drug stores for about 10 cents a pound, and a pound is enough to treat five dozen eggs, so that the cost of preserving is about two cents a dozen.

There are several grades of water glass, and it is wise to get the best. To prepare the solution, stir one part of the silicate of soda into sixteen parts of water which has been boiled, cooled and carefully measured.

It is essential to have the eggs fresh, or the experiment will not be a great success. Those over three days old should not be used, as the air has already had a chance to penetrate them. The very best way is to keep the solution made up ready and put the eggs into it just as soon as they are brought in from the nests, if you have your own chickens.

It is worse than useless to try to preserve eggs that are not fresh or that have been cracked or washed.

Incubation and Gestation Tables

Chickens	20-22 days
Geese	28-34 days
Ducks	28 days
Turkeys	27-29 days
Guinea fowls	28 days
Pheasants	25 days
Ostriches	40-42 days

The period of gestation in animals varies considerably, but the following is an average period based on a long series of observations:

Elephant	2 years
Camel	11-12 months
Ass	12 months
Mare	11 months
Cow	9 months
Sheep	5 months
Goat	5 months
Pig	3½ months
Bitch	9 weeks
Cat	8 weeks
Rabbit	30 days
Guinea pig	65 days

How to Preserve Eggs

Now that eggs are dearer as a rule than they have been for years, many people are inquiring about the methods of preserving them. The old way was to put them in salt or lime. The former the preferred, but it gave the eggs a very strong taste.

The approved method now is to use water glass for the one or "water glass" or silicate of soda. This is a thick syrupy liquid which can be had at most drug stores for about 10 cents a pound, and a pound is enough to last two dozen eggs, so the cost of preserving is about ten cents a dozen.

There are several grades of water glass, and it is wise to get the best. To preserve the eggs, mix one part of the silicate of soda into fifteen parts of water which has been boiled, cooled and carefully strained.

It is essential to have the eggs fresh or the experiment will not be a success. Place them, when cold, and should not be cracked, in the jar or crock and a gallon is generally taken. The very best way is to keep the solution made up ready, and put the eggs into it as soon as they are brought in from the basket, if you have your own chickens.

Place and remove the eggs. Occasionally is needed in this frequently a few drops to dissolving water.

Preserve eggs can be kept in a cool place, if properly done with considerable time, of course.

For keep on pickles, water and cooky, can keep between or four weeks. In winter it can keep much more effective. Place a little crock cracked and on the top before placing the eggs with plenty of salt.

For use in cooky, poor grade, cooking and on hand and allow it to soak, dry, dry or two months of the cooking. Cooked poor dust in the oven.

Preserve eggs will be a success and in winter, for baking or boiling, in water, and through the feathers of hens. In fresh eggs are in the plumage and long as eggs have will answer admirably. Have day for the eggs are in the proper period.

Chicks and young are often killed by lice. See that chicken-house room the head through vent and wings. To all away dress and the feathers in boiling the birds from under the feathers in right and slightly moisten the down of the infested parts with the powder.

Dates of Birds' Nests

It is not in their nature to rest on one spot. Consequently, the dates of their nests are not kept on record, and the dates of their nests are not kept on record.

Nest building is a very important part of the breeding period. When the time is ripe, the male bird is seen to be busy in carrying the material to the nest, and the female is busy in arranging it in the nest.

Nests are made of twigs, moss, leaves, and other materials, and are lined with feathers, hair, and other soft materials.

The nest is built in a tree, or in a bush, or on the ground, or in a hole in a tree, or in a crevice in a rock, or in a building.

The eggs are laid in the nest, and the female sits on them for a period of about 14 days, when the young are hatched.

The period of incubation is usually considerably longer for the cuckoo, it is twenty period based on a long series of observations.

Blackbird	2 days
Chaffinch	12 days
Jay	12 days
Magpie	11 days
Crow	11 days
Starling	11 days
Robin	11 days
Wren	10 days
Thrush	10 days
Lark	10 days
Pipit	10 days
Wagtail	10 days
Yellowhammer	10 days
Bunting	10 days
Cuckoo	10 days

Horse Ailments

(From the Biggle Horse Book)

The majority of horse ailments may be traced, directly or indirectly, to improper feeding and watering, careless management in the stable and in harness. A careless driver is a very frequent cause of loss.

There is no reason why a first-class team, six to eight years old, should not serve continuously and satisfactorily for a term of twelve to sixteen years, if properly protected, fed and looked out for.

If, from improper care or feeding, or from some unavoidable cause, your horse is out of condition, you should dose him with little medicine and much common sense.

The horse that allows himself to be caught lying down may be considered out of condition or lacking sufficient nutritious food. A quart of linseed meal divided into three feeds and added to his grain daily will do him much good and help a quick shedding of the coat.

Blindness.—Consult a skilled veterinarian at once.

Bots.—The bot-fly resembles a honey-bee in size, and in late summer deposits eggs of a yellowish color on the hair of the horse's breast, legs, etc. In trying to bite at these eggs, the animal gets some of them in his mouth and throat. The eggs soon hatch and the larvæ attach themselves eventually to the lining of the stomach, and are then called "bots." They remain in the stomach until the following spring. Of course, the presence of these pests causes more or less irritation, but, as a rule, no serious harm is done in ordinary instances. Contrary to popular belief, bots do not eat holes through a horse's stomach. We do not know of any treatment that will remove bots. *Prevention* should be the horse owner's main reliance. Kill the flies whenever possible; hang pieces of red cloth from the halter throat-latch, so that the shaking of the head when a horse is in pasture may serve to frighten the flies away; and scrape off, from time to time, any eggs which are found on the horse.

Broken-Wind.—See Heaves.

Capped Hock.—May be reduced in the same manner as Wind Galls (which see).

Choking.—Horses that choke thrust out their heads, bend and stretch the neck, while there is a copious flow of saliva from the mouth. In some cases there is distention of the gullet on the left side of the neck, if it has descended so far. If it be in the upper part of the gullet a man accustomed to giving balls may be able to reach it with his hand. Obstructions that have got lower down may be moved upward gently from the outside. Sometimes an obstruction is soft and may be crushed small enough for the animal to swallow it. A mass of meal or other impacted food is sometimes removed by frequent drinks of water, and a drench of olive or cotton seed oil can do no harm. The plan of reaching a whip or heavy piece of rope down the gullet to push the substance into the stomach is risky, in the hands of one not accustomed to the anatomy of the horse.

Choking Distemper.—This disease prevails at times in many parts of the country. It is sometimes called spinal meningitis or putrid sore throat. The animal often falls down paralyzed, cannot arise, and if left prostrate is almost sure to die. He must be got upon his feet, and if he cannot stand must be swung. A majority of cases are fatal. It is caused by some specific poison taken into the system with food or drink, mostly the former. Dirty mangers, rotting roots or meal, and mouldy hay, especially meadow hay, are usually the media by which the disease is acquired. The moral is to have everything sweet and clean that the animal eats and drinks, and have no decayed matter in the entry or in any other part of the barn. (See Distemper.)

Cocked Ankle.—See Knuckling.

Coffin-Joint Lameness.—Same as Navicular Disease (which see).

Colic, Spasmodic.—This begins suddenly. The horse stamps impatiently, looks backward, soon paws, and then rolls. After an interval of ease the pains return with increased severity. Give chloral hydrate, one ounce, in half a pint of water as a drench; or ether and laudanum, two ounces each, in linseed oil, half a pint; or sulphuric ether and alcohol, two ounces of each in eight ounces of water. If nothing else is handy, give of whiskey half a pint in hot water. If not relieved in one hour repeat any of the doses prescribed. The body should be warmly clothed and sweating encouraged. Dip blankets in hot water containing a small quantity

Dove Alleyers

[illegible]

The majority of some alleyers may be typed simply as industrial, as we know having and working, [illegible] management in the [illegible] and [illegible] [illegible] [illegible]

of turpentine, and hold them in place under the body with dry blankets, or rub the abdomen with stimulants or mustard water. If cramp is due to irritation in the bowels, a cure is not complete until a physic of aloes, one ounce; or linseed oil, one pint, is given. Soapy or salt water aids the cure when used as an injection.

Colic, Wind.—Is caused by feeding after a long fasting, or when the animal is exhausted by driving, or by new grain or hay, too much grain fed, or by sour or indigestible food. The horse seems dull, paws, and the pains are continuous. The belly enlarges, and when struck in front of the haunches sounds like a drum. If not soon relieved, difficult breathing, sweating, staggering and death follow. Give alkalines to neutralize the gases formed. No simple remedy is better than common baking soda, two to four ounces. If this fails, give chloride of lime in half-ounce doses, or the same quantity of carbonate of ammonia dissolved and diluted with oil or milk, until relieved. Chloral hydrate is particularly useful in both wind and spasmodic colic. Horsemen would be wise to keep it ready for emergencies. Physic should be given in flatulent colic, and turpentine, one to two ounces, with linseed oil, eight ounces, frequently, to stimulate the motion of the bowels. Colic should not be neglected nor the patient left, until you are certain of cure or death.

Cough.—If a horse coughs, dampen his hay, wet his mixed feed, keep him out of a draught; after exercise blanket him. (See Heaves.)

Cribbing or Wind-Sucking.—This is a bad habit, rather than a disease. The horse bites his manger or other convenient object, sucks air and makes a peculiar grunting noise. Prevention aids a cure. Iron mangers and stable fittings are a great help; or box stalls containing no projecting wooden objects.

Curb.—A curved, unnatural condition of the back part of the hock. Lameness, enlargement and more or less inflammation are symptoms. Liniments, iodine ointment, blisters, and, as a last resort, firing, are all recommended.

Distemper.—Keep hot poultices of bread and milk or oil meal on the neck of horses with throat distemper; change them often. In severe cases, rub the glands and muscles with spirits of turpentine and camphor. (See Choking Distemper.)

Dysentery.—If this trouble exists, place the horse in a dry, well-ventilated stable, rub the surface of the body frequently, and keep it and the legs warm with blankets and bandages. The food must be light and easy to digest, the water pure and in small quantities. Give first, castor oil, one-half pint, and laudanum, two ounces. The strength must be kept up by milk punches, eggs, beef tea, oatmeal gruel, etc.

Eye. — See Hooks, Pink-Eye and Blindness.

Farcy.—A form of glanders which attacks the skin. (See Glanders.)

Fetlock.—If this be sprained and the injury slight, bandage and apply cold water frequently. Where the lameness is intense, and the swelling and heat great, the leg should be kept in a constant stream of cold water. When the inflammation has been subdued, the joint should be blistered. (See Knuckling.)

Fits.—See Staggers.

Founder.—The front feet are usually affected, the delicate laminæ being inflamed. Acute founder, if not cured, develops into chronic founder, and no sure cure is known for the latter stage of the disease. The trouble may come from any one of several causes: Long or hard driving, hard pavements or roads, feeding or watering a horse while he is exceedingly warm or tired, etc., etc. Lameness, pain and heat in the fore feet, are common symptoms. For an attack of this kind, the best things to do are about as follows: Get the shoes off, put the horse in his stall, and soak or pack his feet in cold water, moss, or whatever is handy; give a tablespoonful of saltpeter as a drench three times a day; send for a veterinarian.

Galls.—See Shoulder and Wind Galls.

Giddiness.—A horse which is frequently or occasionally overtaken with this trouble is dangerous to use. It is hard to cure. It indicates the need of moderate driving, especially in hot weather, and that a small amount of hay should be fed.

Glanders.—Whenever a horse is seen to bleed or emit offensive matter from the nostrils, glanders may be suspected and home treatment should not be attempted. It may be a dangerous case, which is fatal alike to man and beast. A veterinary surgeon should be called.

Gorged Stomach.—This results when a horse has been fed after a long fast. The small stomach of a horse is so dis-

of turpentine, and hold them in place under the body with dry blankets, or rub the abdomen with stimulants or mustard water. If relief is slow by [illegible] in the bowels, a cure is not complete until a drench of [illegible], as linseed oil, one pint, is given. [illegible] or salt water into the [illegible] when used as an injection.

COLIC, WIND.—Is caused by feeding after a long fasting, or when the animal is exhausted or [illegible] as to [illegible] grain or hay, too much green food, or by sour or indigestible food. The horse bloats up, paws, and the pains are continuous. The belly enlarges and when struck in front of the haunches, sounds like a drum. If not soon relieved, difficult breathing, sweating, staggering and death follow. Lime [illegible] to neutralize the gases formed. No [illegible] remedy is better than [illegible] to large doses. If this fails, give chloride of lime in half-ounce doses, or the same quantity of carbonate of ammonia, dissolved and diluted with oil or water until relieved. Chloral hydrate is particularly useful in both wind and spasmodic colic. [illegible] would be wise to [illegible] the [illegible]. Fluids should be given in linseed [illegible] and turpentine, one or two ounces, with linseed oil, eight ounces. Injections to stimulate the action of the bowels. Colic should not be [illegible] by the patient [illegible], until you are certain of cure or death.

COUGH.—If a horse coughs, dampen his hay, wet his mixed feed, keep him out of a draught, [illegible] blanket him. (See Heaves.)

CRIBBING, OR WIND-SUCKING.—This is a bad habit, rather than a disease. The horse bites his manger or other convenient object, sucks air and makes a peculiar grunting noise. [illegible] is a cure. [illegible] while [illegible] or a strap [illegible] something to prevent [illegible].

CURB.—A curved, unnatural swelling of the back part of the hock. Lameness, enlargement and heat in the inflammation are symptoms. Liniments, iodine ointment, blisters, and as a last resort, firing, are all recommended.

DISTEMPER.—Keep the poultice of bran and salt or oil meal on the neck of horses with throat distemper; change them often. In severe cases rub the glands and muscles with spirits of turpentine and camphor. (See Choking Distemper.)

DYSENTERY.—If the trouble exists, place the horse in a dry, well-ventilated stable, rub the surface of the body vigorously, and keep it and the legs warm with blankets and bandages. The food must be light and easy of digestion, the water pure and in small quantities. Give fresh grass, [illegible], mashes, [illegible], and [illegible]. The strength must be kept up by malt mashes, [illegible], beef tea, oatmeal gruel, etc.

EYE.—See "Teeth, Pink-Eye and Blindness."

FARCY.—A form of glanders which attacks the skin. (See Glanders.)

[illegible]—It may be sprained and [illegible]. Apply light bandage and apply cold water frequently. When the soreness is intense, and the swelling and heat great, the leg should be kept in a constant stream of cold water. When the inflammation has been relieved the joint should be blistered. (See Blistering.)

FITS.—See Staggers.

FOUNDER.—The front feet are usually affected, the delicate laminae being inflamed. Acute founder, if not cured, develops into chronic founder, and no sure cure is known for the latter stage of the disease. The trouble may come from any one of several causes. Long or hard driving, hard pavements or heavy feeding, or watering a horse while he is exceedingly warm or tired, etc., etc. Lameness, pain and heat in the fore feet are common symptoms. For an attack of this kind, the best things to do are about as follows: Get the shoes off, put the horse in his stall, and pack his feet in cold water, snow, or whatever is handy; give a tablespoonful of saltpeter in a drench three times a day, and [illegible].

GALLS.—See Harness and Wind Galls.

GIDDINESS.—A horse which is frequently or occasionally afflicted with this trouble is dangerous to use. It is hard to cure. It indicates the need of moderate driving, especially in hot weather, and that a small amount of hay should be fed.

GLANDERS.—Whenever a horse is seen to [illegible] or emit offensive matter from the nostrils, glanders may be suspected and home treatment should not be attempted. It may be a dangerous case which is contagious to man and beast. A competent surgeon should be called.

GORGED STOMACH.—The result when a horse has been fed after a long fast. The small stomach of a horse is [illegible]-

tended that it is unable to contract itself upon its contents, a motion which is necessary in digestion. The horse becomes stupid, slight colicky symptoms are observed, and he carries his head low and extended. As he grows worse he paws, becomes delirious, is covered with cold sweat, trembles, slobbers, staggers and drops dead. Treatment is difficult. A purgative of Barbadoes aloes, one ounce, should be given at once, followed by Cayenne pepper, one-half ounce, or Jamaica ginger, one-half ounce. If the bowels can be stimulated to act, they will in a measure relieve the stomach. For this purpose, use turpentine, two ounces, and linseed oil, eight ounces.

Grease Heel.—See Scratches.

Heaves.—A peculiar movement of the abdomen and flank, points to heaves; a cough usually accompanies it. There is no cure for the established disease. Careful dieting will relieve the distress, but this will appear as bad as ever when the stomach is overloaded. The best quality of food lessens heaves. Food that is too bulky and which lacks nutriment, has much to do with the disease. Feed affected animals only a small quantity of hay once a day, and invariably water at least fifteen minutes before feeding, and never directly after meal. Work right after eating aggravates the symptoms. Carrots, potatoes or turnips, chopped or mixed with oats or corn, are a good diet. What bulky food is given should be in the evening. Medical treatment is worth less than dieting. A predisposition to the disease may be inherited.

Hidebound.—A symptom, not a disease. The trouble comes because the horse is out of condition, or because he has worms, bad teeth, indigestion, or some chronic disease.

Hock.—See Capped Hock, etc.

Hooks.—There is a widespread delusion that hooks, so called, is a disease affecting the horse's eye. A barbarous custom among cruel men is to forcibly destroy the membrane which keeps the eye free from foreign substances, but the cruelty does not accomplish the desired result, though it may injure or destroy the eye. The obstinacy of the membrane simply shows something to be wrong in the anatomy of the horse, just as the tongue will indicate to the observing physician when the stomach of his subject is out of order. To cut or disturb the hooks in the eyes is as absurd as to doctor the tongue instead of the stomach in the human case.

Indigestion.—Some horses, although having a good appetite, remain gaunt and thin from indigestion. They should be given some strong purgative, like Barbadoes aloes, combined with powdered ginger, one-half ounce; Glauber's salts, one-half pound, dissolved in a quart of water. When the intestines have been thoroughly cleaned by this process, give daily the following powder: Sulphate of iron, three drachms; sulphate of soda, two ounces; nux vomica, ten grains; ginger, one-half ounce. This powder may be continued daily for a month. Give all the rock salt the animal will lick.

Itching Skin.—Wash the skin thoroughly with carbolic soapsuds, and give the horse a half pound of Glauber's salts daily for a week. Do not feed him any grain but wheat, scalded bran and linseed meal, three quarts of the former and one quart of the latter, for two weeks. There will speedily come a change. Card him daily. Scald his oats and give him salt daily. Feed oats, bran and linseed after the two weeks and scald the whole mess. When horses are covered with bunches or lumps, their blood is out of order. Give doses of Glauber's salts daily and hot bran mashes. Give salts a half pound daily. A gill of *raw* linseed oil every day will be good, mixed with the bran.

Knuckling or Cocked Ankle.—A condition of the fetlock joint which resembles partial dislocation. The trouble is not considered unsoundness, but it predisposes to stumbling. Foals are quite subject to it, and no treatment is necessary, as the legs straighten up naturally in a few weeks. It is caused in horses by heavy and fast work, and is produced sometimes by a disease of the suspensory ligament, or of the flexor tendons. This should be relieved by proper shoeing. The toe must be shortened and the heels left high, or the shoe should be thin forward with thick heels or high calks.

Lameness.—May be due to founder, navicular disease, faulty shoeing, sprains, spavin, etc., etc.

Laminitis or Founder.—See Founder.

Lampas. — Usually an imaginary trouble. Very rarely does the membrane directly beneath the upper front teeth congest and swell enough to interfere with feeding. When this trouble is feared there is no quicker nor surer

[illegible]

[illegible]

[illegible]

cure than feeding a little corn in the ear. When biting off the kernels, the horse naturally compresses the membrane or forces it back. The burning of the lampas is cruel and unnecessary, and if the swelled parts are cut, the cut should not be deep, or danger will result.

LICE.—Remove these by rubbing the horse with a solution of sulphate of potassium, four ounces, and water, one gallon; or with strong tar water; or dust with Persian insect powder; or the skin may be sponged with benzine or quassia chip tea. Any of the applications must be repeated a week later to destroy the lice hatching in the interval. All blankets should be boiled, and the stalls painted with turpentine, and littered with fresh pine sawdust.

LOCKJAW.—This is caused by cuts, nail in the hoof, etc. Nothing is so common from wounds in the feet and from docking. The horse is unable to open his jaws to the fullest extent, and mastication is impossible. Various muscles twitch, the head and tail are elevated and the nose protruded, and the anus is compressed. The animal swallows with difficulty; saliva flows from the mouth. Of course, in this disease the necessity of calling in a skilled veterinary surgeon is indicated.

MEGRIMS.—See Giddiness.

MENINGITIS, SPINAL. — See Choking Distemper.

OVERWORK, OVERHEATING, ETC.—An experienced horseman, if humane, will not push his horse beyond his strength. An indiscreet driver will sometimes bring an animal to the verge of extinction. The symptoms are plain in the audible breathing, staggering gait, exhausted appearance and heaving flank. The girts must be removed and the face turned toward the wind, the animal being protected from the sun meantime. The head must be left free and the limbs and body well rubbed. The movement of the ribs should not be hindered in any way. A few swallows of cold water may be allowed, and, in hot weather, the mouth, forehead and face may be sponged with it. When sufficiently revived, the horse should be slowly led to a comfortable box-stall and heavily blanketed, woolen bandages being wound about the legs as well. If the horse has fallen he must not be allowed to lie until he voluntarily gets up, but must be propped up on his breast and not allowed to lie flat on his side. Heat exhaustion is somewhat similar in symptom and demands similar treatment, with the addition of throwing cold water over the animal, particularly wetting the head, and causing a current of air to pass over him that evaporation may take place.

PINK-EYE.—A species of influenza which causes inflammation of the eye. It is contagious. Isolate the patient; disinfect his old stall; blanket him and feed him warm mashes and laxative food; bathe the eyes occasionally with hot water. Boric acid (one dram diluted with three ounces of water) makes an excellent solution for dropping into sore eyes, at intervals of three or four hours.

RING BONE.—An osseous exudation or bony deposit at the crown of the hoof. When its presence is first detected the place should be severely blistered once or twice, or red iodide of mercury applied. If this fail, firing with the hot iron in the hands of a competent surgeon will be necessary.

ROARING.—A disease of the muscles of the larynx and a vocal cord. Causes a roaring or whistling sound when the horse is exercising. This trouble may come from straining the respiratory organs, it may be an after-effect of distemper, or it may have been inherited. Treatment is of little benefit, although a surgical operation sometimes brings relief.

SCRATCHES OR GREASE HEEL.—This trouble is frequently the result of carelessness in cleaning and ventilating the stable. Many a horse is ruined by allowing the legs to go dirty. It takes only a few minutes to wash them clean and rub them dry. If the skin begins to crack it must not be left or it will become almost incurable. The skin must be kept clean and soft. The disease may result from the condition of the blood, from unwholesome fodder, or work in irritating mud or dust, especially of a limestone character. It has been brought on by using caustic soap on the legs, clipping the heels in winter time, by debilitating disease, etc. The first step in a cure is to remove the cause, and if there is much local heat, administer a laxative, like a pound of Glauber's salts. Highly-fed animals should have their rations reduced, or replaced by bran mashes, flaxseed, fruits, roots, and other non-stimulating food. Bitter tonics are essential also, and may be continued six weeks to two months. If the skin is unbroken, bathe with

similar in symptoms and demands similar treatment, with the addition of throwing cold water over the animal, particularly covering the neck, and causing a current of air to pass over him that evaporation may take place.

Pink-Eye.—A disease of [illegible] which causes inflammation of the eye. It is contagious. Isolate the patient, disinfect his old stall, blanket him and feed him warm mashes and laxative food; bathe the eyes continuously with hot water. Cloths wet [illegible] with three ounces of [illegible] in a quart of water make an excellent solution for dressing the inflamed eyes, at intervals of three or four hours.

[illegible].—An [illegible] on some deposit at the [illegible] of the hoof. When the pressure is first detected the place should be carefully [illegible] once or twice, or [illegible] of [illegible] applied. If [illegible] with the hot iron to the hands of a competent surgeon will be necessary.

Roaring.—A disease of the muscles of the larynx and a vocal cord, causing a roaring or whistling sound when the horse is exercising. This trouble may come from straining the respiratory organs, it may be an after-effect of distemper, or it may have been inherited. Treatment is of little benefit, although a surgical operation sometimes brings relief.

Scratches or Grease Heel.—This trouble is frequently the result of carelessness in cleaning and ventilating the stable. Many a horse is ruined by allowing the legs to get dirty. It takes only a few minutes to wash them clean and rub them dry. If the skin begins to crack it must not be left or it will become almost incurable. The skin must be kept clean and soft. The disease may result from the condition of the blood, from unwholesome feeding, or work in irritating mud or dust, especially of a limestone character. It has been brought on by using caustic soap on the legs, [illegible] by [illegible], etc. The first step in a cure is to remove the cause, and if there is much local heat administer a laxative, like a pound of Epsom salts. Thoroughly [illegible] animals should have their rations reduced or [illegible] by bran mashes, boiled feeds, roots, and other non-stimulating food. [illegible] are beneficial also and may be [illegible] six weeks or two months. If the skin is unbroken, bathe with

cure than leaving a little space in the toe. When [illegible] off the [illegible], the horse naturally [illegible] the weight [illegible]. The [illegible] of the [illegible] is [illegible] and [illegible], and if the [illegible] parts [illegible], the [illegible] should not be [illegible] or [illegible].

Lice.—Remove them by rubbing the horse with a mixture of [illegible] of potassium, four ounces, and water, one gallon; or with strong [illegible]; or [illegible], with Persian insect powder; or the skin may be sponged with [illegible] or [illegible]. Any of the applications must be repeated a week later to destroy the lice hatching in the interval. All blankets should be boiled and the stalls [illegible] with [illegible], and [illegible].

Lockjaw.—This is caused by [illegible] in the foot, etc. Nothing is so common from wounds in the feet and from docking. The horse is unable to open his jaws in the later stages, and mastication is impossible. Various muscles twitch, the head and tail are elevated and the nose protruded, and the [illegible] is [illegible]. The animal swallows with difficulty; saliva flows from the mouth. Of course, in this disease the necessity of calling in a skilled veterinary surgeon is indicated.

Mallenders.—See Sallenders.

[illegible], Nasal.—See Choking Distemper.

Overwork, Overexertion, Etc.—An experienced horseman, if humane, will not push his horse beyond his strength. An indiscreet driver will sometimes bring an animal to the verge of exhaustion. The symptoms are plain in the animal: [illegible], staggering gait, [illegible] appearance and heaving flanks. The girth must be removed and the [illegible] turned toward the wind, the animal being protected from the sun meanwhile. The head must be held up and the limbs and body well rubbed. The movement of the ribs should not be hindered in any way. A few swallows of cold water may be allowed, and [illegible], the mouth, forehead and face may be sponged with it. When sufficiently revived, the horse should be slowly led to a comfortable stall and heavily blanketed, woolen bandages being wound about the legs as well. If the horse has fallen it should not be allowed to lie until he voluntarily gets up, but must be propped up on his breast and not allowed to lie flat on his side. Heat exhaustion is somewhat

water, one quart, in which sugar of lead, two drachms, is dissolved; or anoint with vaseline, one ounce, sugar of lead. one drachm, and carbolic acid, ten drops. To clip the hair from the horse's heels and poultice them with grated carrot, night and morning, is sometimes beneficial. Free exercise is important. Rub the heels dry and apply equal parts of glycerine and compound tincture of aloes. Or try this: Cut the hair off short and paint it over with chloride of zinc and water—thirty grains to one pint of water. Put this on once a day and rub with glycerine.

SHOULDER.—Have properly fitting collars. If the surface galls under the collar, wish with salt and water at night and with clear water in the morning, and protect the spot with a pad under the collar. If the skin breaks, use a lotion of one drachm of carbolic acid to one quart of water twice a day, and relieve the horse from work for a day or two. It is cruel to work a horse with a raw, sore shoulder. Various forms of shoulder lameness exist. (See Sweeny, Navicular Disease, etc.)

SKIN.—See Itching Skin.

SPAVIN.—If you have a suspicion of a spavin coming on your horse, employ a good veterinary surgeon. Heroic treatment is the only thing in such cases. Judicious firing, strong blistering and perfect rest for at least six weeks or two months, and good nursing will, in most cases, arrest the disease and cure lameness. It is the result of too great exposure in draught or speed, or from slipping and kindred causes.

SPINAL MENINGITIS. — See Choking Distemper.

SPLINT.—This may be rubbed off and the work aided by putting on a liniment, but few would persevere in the rubbing long enough to make a cure. A blister will do it.

SPRAINS.—See Fetlock, etc.

STAGGERS OR FITS.—Horses liable to this trouble should have harnesses that are carefully adjusted, and should not be pushed in hot weather. No heavy feed should be given them at any time, oats and sweet hay or grass being the best. Such animals should not be driven when it can be avoided. When indications point to an attack, the horse should be stopped, his harness loosened, some cold water given him to drink and his face sponged at the same time. Rye is a bad feed for sleepy staggers.

STRING HALT.—Cures are difficult and rare. Consult a veterinarian.

SUNSTROKE.—See Overheating.

SWEENY.—This is often called shoulder lameness, and it causes the wasting away of some muscles on the outside of the shoulder blade. The trouble, as a rule, is brought about by extra-hard work or pulling when a horse is young. More or less lameness is a symptom of sweeny. Easy work; perfect-fitting collars; rubbing with liniment; light blisters, etc., are recommended, but a cure is difficult and tedious, as a general thing.

TEETH.—A twenty-year-old horse was not doing well. Upon examination his front teeth were found to be so long that his grinders were kept from coming together, and he could not masticate his food. His teeth were filed off, and the sharp points evened with a float, and he is now doing as well as any of the younger horses. Watch the teeth of the old horse. (See Lampas.)

THOROUGH-PIN.—An enlargement between the point of the hock and the front of the hock joint. Treatment should be the same as for wind-puff.

UNNATURAL APPETITES.—The horse which eats its own excrement, dirt, etc., does it for the acids and salts found in such substances. Give such a horse a *pinch* of copperas, bone dust, salt, ashes and saltpetre mixed in its meal once a day. A few days of pasturing will prove beneficial.

WHEEZING.—Horses often snort and wheeze because of an enlargement of the glands in the nostrils. A skilled veterinarian can remove the trouble by cutting it out. Doctoring will not cure snoring or wheezing horses. The air passages are stopped. Wheezing may also be caused by a form of asthma called Heaves (which see).

WIND GALLS OR PUFFS.—The treatment consists in pressure by means of bandages and by cold lotions; also, hand rubbing and iodine ointment.

WIND-SUCKING.—See Cribbing.

WORMS.—Horses having greedy appetites, rough coats and poor condition may be suspected of worms. Such animals often pass long, round worms. Copperas or tobacco will clear the worms out of the stomach of a horse. A tablespoonful of copperas for two days and then stop for two. A handful of tobacco dried and made into powder and mixed with the grain. Give this for

[illegible]

[illegible]

[illegible]

three days and then omit it for a few days. For worms in the rectum a syringe must be used. Salt and water are good; or, carbolic acid diluted fifty times in water; or, what is better, thymo-cresol, diluted one to fifty parts of water.

PUNCTURE.—It is dangerous for a horse to step on a nail, as it is likely to result in lockjaw. Have the blacksmith cut out the puncture down to tender flesh, then fill the opening with a 5 per cent. solution of carbolic acid and pack with cotton to keep out dirt, and repeat daily, soaking the foot in clean warm water before dressing.

NAVICULAR DISEASE is indicated by a shrunken shoulder, and a contracted foot that is placed several inches in advance of the other while at rest. This is an inflammation or ulceration of the pedal sesamoid at the point where the tendons play over it. The symptoms are often very obscure, according to the stage of the disease, and the lameness is attributed to some difficulty in the shoulder. This, however, is a mistake. It is due to the wasting of the shoulder muscles from disease. The cause is usually fast work on hard roads or pavements, causing slight inflammation, which being unnoticed or neglected, increases and ends in ulceration. The best treatment is to remove the shoe, pare down the hoofwall and round the edge to prevent splitting, then fire deeply in points around and above the coronet, follow up with one or more blisters of red iodide of mercury, one part, lard, three parts, and when the effects pass off, turn out the animal to pasture for six weeks. It is always best to consult, in this disease, a competent veterinary surgeon.

CORNS originate in simple bruises. There is later an increased production of hoof, and the formation of a horny tumor which presses on the quick. If of recent formation apply a bar shoe and rasp down the bearing surface of the afflicted heel and avoid pressure. Soak the feet. A horny tumor must be pared to the quick and packed with tar. Shoe with a bar shoe and place a leather sole between it and the hoof. If the corn be further advanced the foot should be soaked in a bucket of hot water for an hour, and then poulticed. Any matter that has formed should be liberated, and if grit or dirt has got into the heel this should be cleaned out. Poultices should be kept upon the wound until it is healed and free from soreness. If the cause is so serious that matter has burst out at the top of the heel, only a veterinary surgeon is competent to manage it.

THRUSH is a disease which shows an excessive secretion of unhealthy matter in the frog, and is detected by its vile odor. A common cause is foul stables. The cure consists in cleanliness and the removal of the cause. The diseased and ragged portions of the frog should be pared and scraped and the foot poulticed for a day or two with oil meal and water, to which may be added a few drops of carbolic acid, or some powdered charcoal. The dressing should be changed daily, and after every vestige of decayed substance is removed, the cleft of the frog and grooves on its edges should be cleaned and packed with oakum, held in place by leather nailed on with the shoe. Before packing, cover the place with a good coat of sulphate of zinc, pressing well in. Horses especially liable to thrush may need to be protected in the stable by the use of boots. Sometimes other diseases combine with thrush, making a cure seem impossible.

Dehorning Calves

Taking horns off yearling or older cattle is a hard shock to them. It costs a week's feed, and may cost much more. It is very easy to prevent the horns starting, requiring only thoughtful attention for a few minutes before the horns have come through the skin.

The following recipe has never failed: Procure common powdered concentrated lye, such as all housewives use. A 10-cent can will dehorn 100 calves. When the calf is a week or more old, before the horn has come through the skin, and when you can feel it in the shape of a little button under the skin, take the calf in hand. Lay him gently on his side. Spit on the little bump and rub it in with your finger, till a place is wet as big as a silver quarter of a dollar. Don't wet anywhere else. Take your knife and lift out dry the powdered lye, as much as two grains of corn. Press it down on the wet place. It will stick there. Treat the other side in the same manner. Let the calf go. It won't hurt him much, or long. A scab forms; do not touch it. It will peel off after a time, and the hair will grow over the place; you will have a fine, smooth head, equal to a natural polled head.

of hoof, and the formation of a horny tumor which presses on the sensitive [illegible]. If of recent formation, apply a bar shoe and rasp down the bearing surface of the affected heel and avoid pressure. Soak the foot. A horny tumor must be [illegible] out as [illegible] and packed with [illegible] then with a [illegible] and [illegible] between it and the hoof. If the [illegible] further, the [illegible] should be [illegible] in a [illegible] for [illegible], and then [illegible]. Any [illegible] that [illegible] should be [illegible], and [illegible] the [illegible] should be [illegible] out. [illegible] should be kept upon the wound until it is healed and free from soreness. If the [illegible] is so serious that matter has [illegible] out at the top of the hoof, [illegible] a veterinary surgeon is competent to manage it.

Thrush is a disease which shows an excessive secretion of unhealthy matter in the frog, and is detected by its foul odor. A common cause is foul stables. The cure consists in cleanliness and the removal of the cause. The diseased and ragged portions of the frog should be pared and scraped and the foot soaked for a day or two with [illegible] and water, to which may be added a few drops of carbolic acid, or some powdered charcoal. The dressing should be changed daily, and after every vestige of diseased substance is removed, the cleft of the frog and grooves on its edges should be cleaned and packed with oakum, held in place by leather tacked on with the shoe. Before packing, cover the place with a good coat of [illegible] of zinc, pressing well in. [illegible] Thrush may need to be protected in the stable by the use of boots. Sometimes other diseases [illegible] with thrush, making a cure more [illegible].

three days and then rest it for a few days. The answer to the question a [illegible] must be used. Salt and water are good, or [illegible] and [illegible] times in water; or, what is better, [illegible] one to fifty parts of water.

Interfering—It is dangerous for a horse to step on a [illegible] as likely to result in lockjaw. Have the blacksmith [illegible] out the [illegible] down to tender flesh, then fill the opening with a 5 per cent. solution of carbolic acid and pack with cotton to keep out dirt, and repeat daily, washing the foot in clean, warm water before dressing.

Navicular Disease is indicated by a shortened shoulder, and a contracted foot that is placed several inches in advance of the other while at rest. This is an inflammation or ulceration of the [illegible] the joint [illegible]. The symptoms are often very obscure, according to the stage of the disease, and the lameness is attributed to some difficulty in the shoulder. This, however, is a mistake. It is due to the wasting of the shoulder muscles from disuse. The cause is usually fast work on hard roads or pavements, causing slight inflammation, which being neglected or unnoticed, increases and ends in ulceration. The best treatment is to remove the shoe, pare down the hoof wall and round the edge to prevent splitting, then fire deeply in points around and above the coronet, follow up with one or more blisters of [illegible] of mercury, [illegible], three parts, and when the effects pass off, turn out the animal to pasture for six weeks. If it [illegible] in this manner, a [illegible] surgeon.

[illegible] [illegible]. There is later an increased [illegible]

Dehorning Calves

Taking horns off cattle or older cattle is a hard shock to them. It costs a week's feed, and may cost much more. It is very easy to prevent the horns starting, requiring only thoughtful attention for a few minutes before the horns have grown through the skin.

The following [illegible] has [illegible]: Procure common powdered [illegible], such as all druggists keep; [illegible] cent [illegible] will [illegible] 100 calves. When the calf is a week or more old, before the horn has grown through the skin and when you can feel it in the shape of a little button under the skin, take the calf in hand. [illegible] on his side. [illegible] on the little bump and rub it in with your finger, till a place is wet as big as a quarter of a dollar. Don't wet anywhere else. Take your knife and [illegible] the powdered [illegible] as much as two grains of corn. Throw it down on the wet place. It will [illegible] there. Keep the calves away [illegible]. [illegible] If [illegible] too much [illegible]. It will peel off [illegible] and the hair will grow over the place; you will have a nice smooth head, equal to a natural polled head.

Concrete

Concrete is made by mixing together Portland cement, sand and stone (or gravel). Various proportions of each are used, depending upon the use to which the concrete is put. About half an hour after mixing these materials together, the mass begins to stiffen, until, in from half a day to a day, it becomes so hard that you cannot dent it with the hand. By a month the mass is hard as stone—indeed, harder than most stones. The best way to buy cement is in cloth sacks. Manufacturers charge more for cement in cloth sacks, but allow a rebate for the return of the empty sacks. A bag of cement weighs 95 pounds, and four such bags make a barrel of 380 pounds.

It is important that your stock of cement be kept in a dry place. Once wet, it becomes hard and lumpy, and in such condition is useless. If, however, the lumps are caused by pressure in the storehouse, the cement may be used with safety. Lumps thus formed can be easily broken by a blow from the back of a shovel.

In storing cement, throw wooden blocks on the floor. Place boards over them and pile the cement on the boards, covering the pile with a canvas or a piece of roofing paper. Never, under any circumstances, keep cement on the bare ground, or pile it directly against the outside walls of the building.

Do not use very fine sand. If there is a large quantity of fine sand handy, obtain a coarse sand and mix the two sands together in equal parts; this mixture is as good as coarse sand alone.

Sometimes fine sand must be used, because no other can be obtained; but in such an event an additional amount of cement must be used—sometimes as much as double the amount ordinarily required. For example, in such a case, instead of using a concrete 1 part cement, 2½ parts sand and 5 parts stone, use a concrete 1 part cement, 1¼ parts sand and 2½ parts stone.

Besides being coarse, the sand should be clean. The presence of dirt in the sand is easily ascertained by rubbing a little in the palm of the hand. If a little is emptied into a pail of water, the presence of dirt will be shown by the discoloration of the water. This can be discovered also by filling a fruit jar to the depth of 4 inches with sand and then adding water until it is within an inch of the top. After the jar has been well shaken, the contents should be allowed to settle for a couple of hours. The sand will sink to the bottom, but the mud, which can be easily recognized by its color, will form a distinct layer on top of the sand, and above both will be a clear depth of water. If the layer of mud is more than one-half inch in thickness, the sand should not be used unless it is first washed.

To wash sand build a loose board platform from 10 to 15 feet long, with one end a foot higher than the other. On the lower end and on the sides nail a board 2 by 6 inches on edge to hold the sand. Spread the sand over this platform in a layer three or four inches thick, and wash it with a hose. The washing should be started at the high end and the water allowed to run through the sand and over the 2-by-6-inch piece at the bottom. A small quantity of clay or loam does not injure the sand, but any amount over 5 per cent. does.

Great care should be used in the selection of the stone or gravel. The pebbles should be closely inspected to see that there is no clay on their surface. A layer of such clay prevents the "binding" of the cement. If necessary, stone or gravel may be washed in the same way as above described for sand. Dust may be left in the crushed stone without fear of its interfering with the strength of the cement, but care should be taken to see that such dust is distributed evenly through the whole mass, and when dust is found in stone, slightly less sand should be used than ordinarily. As to the size of stone or gravel, this must be determined by the form of construction contemplated. For foundations or any large thick structure, use anything from ½ to 2½ inches in diameter. For thin walls use ¼ to 1-inch stone. The best results are obtained by the use of a mixture of sizes graded from small to large. By this means the spaces between the stones or pebbles are reduced and a more compact concrete is obtained. Moreover, this method makes it possible to get along with less sand and less cement.

Water for concrete should be clean and free from strong acids and alkalies. It may be readily stored in a barrel.

Concrete

Concrete is made by mixing together Portland cement, sand and stone (or gravel). Varying proportions of each are used, depending upon the use to which the concrete is put. Within an hour after mixing, [illegible] chemical reaction, the mass begins to stiffen, [illegible] it [illegible] until [illegible] as hard as stone—harder than most stone. The best way to buy cement is in cloth sacks. Manufacturers charge more for cement in cloth sacks, but allow a rebate for the return of the empty sacks. A bag of cement weighs 95 pounds, and four such bags make a barrel of 380 pounds.

It is important that your stock of cement be kept in a dry place. Once wet, it becomes hard and lumpy, and in such condition is useless. If, however, the lumps are caused by pressure in the stockpile, the cement may be used with safety. Lumps thus formed can be easily broken by a blow from the back of a shovel.

In storing cement, throw wooden blocks on the floor. Place boards over them and pile the cement on the boards, covering the pile with a canvas or a piece of roofing paper. Never, under any circumstances, keep cement on the bare ground or pile it directly against the outside walls of the building.

Do not use very fine sand. If there is a large quantity of fine sand handy, obtain a coarse sand and mix the two thoroughly together in equal parts. This mixture is as good as coarse sand alone.

Sometimes fine sand must be used, because no other can be obtained; but if this be the case an additional amount of cement must be used—sometimes as much as double the amount ordinarily required. For example, in such a case, instead of using a mixture 1 part cement, 2½ parts sand and 5 parts stone, use a concrete 1 part cement, 2½ parts sand and 2½ parts stone.

Besides being coarse, the sand should be clean. The presence of dirt in the sand is easily ascertained by rubbing a little in the palm of the hand. If a little is stirred into a pail of water, the presence of dirt will be shown by the discoloration of the water. This can be determined also by filling a [illegible] jar to the depth of 4 inches with sand and then adding water until it is within [illegible]

as much of the sand. After the jar has been well shaken, the contents should be allowed to settle for a couple of hours. The sand will sink to the bottom, but the silt, which can be easily recognized by its color, will form a distinct layer on top of the sand and above that will be a clear layer of water. If the layer of silt is more than one-half inch in thickness, the sand should not be used unless it is first washed.

To wash sand build a trough formed of planks about 10 to 15 feet long, with one end a foot higher than the other. On the lower end and on the sides nail a board 3 by 6 inches on edge to hold the sand. Spread the sand over the platform in a layer three or four inches thick, and wash it with a hose. The washing should be started at the high end and the water allowed to run through the sand and over the 3-by-6-inch piece at the bottom. A small amount of clay or loam does not injure the sand, but too much [illegible] cement, etc.

Great care should be used in the selection of the stone or gravel. The pebbles should be closely examined to see that there is no clay on their surface. A layer of such clay prevents the "binding" of the cement. If necessary, stone or gravel may be washed in the same way as above described for sand. Shale may be left in the gravel stone without fear of its interfering with the strength of the cement, but care should be taken to see that such shale is hardened [illegible] through the whole mass, and when that is found to be the case, [illegible] should be used there [illegible]. As to the size of stone or gravel, this must be determined by the form of construction contemplated. For foundations or any large thick structure, the stone may be ½ to 2½ inches in diameter. For thin walls use ¼ to 1-inch stones. The best results are obtained by the use of a mixture of stone graded from small to large. By this means the spaces between the larger pebbles are reduced and a much smaller quantity of cement is needed. Moreover, this method makes it possible to get along with less sand and less cement.

Stone for concrete should be clean and free from strong acids and alkalies. It may be readily stored in a barrel.

Anderson Trust Company

ANDERSON, INDIANA

Oldest, Largest and Strongest Trust Company in Madison County

Does a General Banking, Trust and Insurance Business

Makes Farm Loans with privilege to borrower of paying back at any time $50.00 or more, and stopping interest.

Negotiates Sale of Real Estate.

Safe Deposit Boxes for Rent.

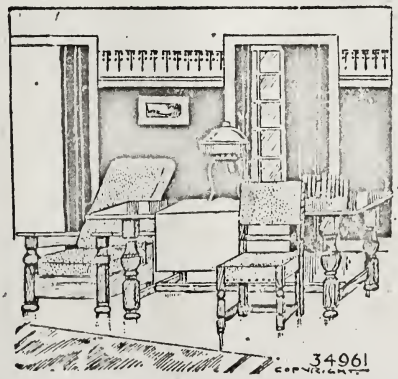
Sells Non-taxable Bonds netting investor over FOUR PER CENT. interest.

Our Steel Lined Vault is the strongest in the city of Anderson, Indiana.

We Cordially Solicit Your Patronage and Acquaintance

FURNITURE, STOVES and CARPETS

New and Second-Hand



Your Home

can be luxuriously comfortable and furnished in good taste by buying from our large assortment of second-hand furniture. Some of it is high grade and has seen comparatively little use.

Its low price is a strong argument for you to buy.

Look it over carefully before paying higher prices.

Carfare Free!

You can have free fare **ANYWHERE** by trading with merchants who give universal mileage coupons. We give a 1-mile coupon for every dollar spent in our store, and on special days more. Watch for the special days. Come in for particulars.
